If you purchase Ableton Suite, you get 30-days of free, non-expiring access to the free trial version of Live 8 and instruments from such companies as Ableton, Reaktor, GarageBand, Propellerhead, and Maggicitone. Along with Live 8 and its instruments, Ableton Suite also includes Live's narrative music toolkit, which allows you to create custom musical pieces (or instruments) that can be reused across projects. Narrative also provides some other handy tools for generating audio in real time, such as sample and synthesizer instruments. Ableton Live 7 is available for Windows and Macintosh, and it's designed to run on both 32-bit and 64-bit Intel-based computers. We've put together a list of links to tutorials that use Ableton Suite to demonstrate how to produce music. (In most cases, the videos are hosted by YouTube, which lets you view content in Flash format.) Appendix: Best Compression Plugins for Ableton Live 7 If you're using Ableton Live 7, then you'll probably want to use compression plugins. As a brief disclaimer: You won't find a definitive list of the best, most-used compression plugins for Ableton Suite. Our experience is that it depends largely on the type of music you're making. For example, if you're making EDM, you'll want to use plugins that have a wide range of usable presets, but if you're making any kind of pop music, you'll want to use plugins that don't have a lot of presets. If you want to compare all of the different compression plugins for Ableton, use the following links: To get plugins that work well with Live, check out the following links: NOTE: The links to compressors generally work with both Windows and Macintosh versions of Live. To learn how to use these plugins, check out the following links: You can also view a list of the compression plugins that we like using in our own work and in the work of other producers. To find more about using these plugins, check out the following links: This is the first section of the chapter. QuickTime Plugins Ableton Live has a 82157476af
